# skypass

---

If you have this map in your hands,  
you have accepted the challenge: to climb the great  
mountain and arrive where the gaze is lost.

Unparalleled views to explore, the living nature to meet,  
a sky in which to walk.

Skyway Monte Bianco is not just a cable car.  
Get ready.

## The Valley

### Café des Alpinistes

The excitement grows as well as the desire to leave. The cable car is waiting for you. But first give yourself a little souvenir of the journey you are about to embark on, savouring the wait. The Café des Alpinistes, a meeting point for mountain guides, is the perfect place to

discover the stories and legends that inhabit the peaks. One more step and you will have left everything behind: here you will no longer be a mere visitor. This is how unforgettable adventures begin.

Even if you can't see it, the threshold is here. One more step and you leave everything behind you. Here you will not be a simple **visitor**. This is the start of an unforgettable adventure.

Meeting the mountain, learning to recognise its secrets while respecting it: this is the second step to becoming a Skynaut. Being an **explorer**.

## Pavillon

Level -1

### The Mountain

#### Alpine Restaurant

The white light coming in through the windows, the innovative design and the infectious cheerfulness of the other Skynauts are a real invitation.

Like any explorer, you too can take a break and enjoy the sun, relaxing on the panoramic terrace, surrounded by the majestic peaks. Here, the Aosta Valley is told and served. Savour an Alpine lunch with quality raw materials that will take you on a discovery of the territory and its history.

#### Exhibition “John Colton, the four elements of Mont Blanc”.

The mountain has always inspired artists of every era, becoming a symbol of majesty, challenge and serenity. John Colton stands out for his ability to capture the essence and beauty of the peaks through his drawings and paintings. His art is not just a visual representation, but a real emotional journey to high altitudes. John Colton's passion for the mountains is reflected in each of his works. It is not just not just an artistic exercise, but a true true celebration of nature.

Colton is regarded as a symbol of ‘heroic mountaineering’, an undisputed lover of the mountains and Mont Blanc.

His works are a tribute to nature, capable of evoking wonder in the the observer.

A journey to high altitudes through the eyes and heart of an artist in love with the mountains.

The exhibition is located at the intermediate station of Pavillon at 2,173, on floor -1.

A tribute to the mountains and to Mont Blanc through art.

#### Alpine Cinema

An unexpected spectacle. Awaiting you will be not only the big movie screen but also rows of seats and cosy armchairs.

The real spectacle, however, will be sitting in a magical room, at an altitude of more than 2,000 metres, watching a film, listening to a voice narrating or attending a conference. It will be like sitting in the company of the mountain

## Hangar 2173

### Past and present:

#### from the Mont Blanc cable car to Skyway

Follow the cable and let yourself be led into the Hangar, the place where the history of Skyway Bianco is kept. You will discover the first projects, the construction site that touches the sky, the passion and the realisation of a work worthy of the mountain that hosts it.

Climb aboard the old cable car and touch the past with one hand. Skyway Mont Blanc has taken up the legacy of those who, as early as 1947, dared to push the boundaries.

## The Mountain Bar

There are different ways to discover the mountain and sometimes, eyes looking for the landscape, are not enough. It is also in your nose, on your palate. Here, every dish

reveals a mystery, every flavour is knowledge, every aroma a bridge between today's food and wine and the vitality of local nature. Here, every flavour is a story suspended halfway between the valley and the mountain top.

## Cave Mont Blanc

At 2173 metres, the pressure is lower and the temperature colder. Grapes are also affected by altitude and climatic conditions, but when someone knows how to handle them, magic happens.

Each bunch, each grape, skilfully placed to rest in the snow, is transformed into a liquid treasure that you, Skynauta, will find enclosed in bottles of Cuvée des Guides

### Mont Blanc Infinity Room

**Infinity, artistic room dedicated to Mont Blanc in the enchantment of its season.** Admiring the mountain by entering a small technological refuge is an experience within an experience. Flying over the highest peaks just like eagles, or descending into an ice cave, seeing the summit of Mont Blanc, experiencing the true and unique images of the Alps.

Being amazed by the melting snow or the blooming of alpine flowers, or simply watching the clouds carried by the wind getting caught on the high pinnacles. An unmissable experience within an experience through real images in a surreal room.

# Tor di Pavillon.

## Pavillon The Mountain

Level 1

### Paul Helbronner and the Mont Blanc

Have you ever wondered where the name Punta Helbronner comes from? The peak, on which the last Skyway station is located, is named after Paul Helbronner a geodesist engineer with a passion for painting and photography. At the turn of the twentieth century, this man from the valley bottom championed a rather crazy mission: to measure the French Alps as accurately as possible. Do you want to know if he succeeded? Visit the exhibition all about him.

### SkyGarden - Terrazza Solarium

Take a break. Close your eyes. Enjoy the combination of the fresh, clean air that fills your lungs and the warmth of a sun which here, at 2200 metres, is more vivid and closer than ever before. Unwind, relax and stretch your muscles. The Solarium Terrace is a unique opportunity to enjoy the sun's caress on your skin while admiring the spectacle below you: Courmayeur, Val Veny and Val Ferret.

### Pavillon's Tor

The experience of feeling the mountain under your feet, but first you have to know how to deal with it.

Some days the snow is compact and supportive, others not: ask the experts at the Mountain Bar for advice and they will give you the right pair of snowshoes if you need them. You will then be ready for your small but great conquest: venturing into the wonder of winter, following the infinite.

### Saussurea Botanical Garden

In the winter they rest under an icy white blanket, but when you come back in the spring, you will be able to walk through over nine hundred species of Alpine plants from all over the world, learn their names, and smell their perfume. Here you will discover that every bud, every stem, every leaf hides a story because each plant is the testimony and star of the life that blooms up there where the air is rare.

# Punta Helbronner

The Sky

The air up here is thin and it changes you. You are lighter. In this beauty, a **pilgrim** is born within you. Now you can walk in the sky

## Level 3

### 360° Observatory

You have been getting ready for this moment for two thousand metres: this is where your ascent ends. Inside you there is the same euphoria as when you set out, but your climb has changed. You could try to embrace it all with a look, but this enchantment will not fit into your eyes. You could try and give every summit a name, but they speak even if you don't call them by name.

There is no higher point in Italy: you are at the lowest point of the sky.

## Level 2

### Kartell Bistrot Panoramic

Imagine yourself on a cloud. Sitting softly between the earth and the sky. Around you, the majestic mountains, below you the last metres of a winter-clad mountain and above you the lightness of the air that is absolute here.

You want to stay and you can.

Make yourself comfortable and go discover the flavours of the territory.

### A final step towards the sky

If you want to see the valleys, go up a mountain, if you want to see the peak, climb onto a cloud.

Up there, where the air is pure and rare, time slows down, silence envelops you. Everything in its place, calm and beautiful. Against this landscape without end, where rock and sky merge in a unique, surreal background, reality meets all your expectations.

Once you have reached the highest point, you see the world from a different perspective. But it is not the world that has changed. You have.

## Punta Helbronner The Sky

Level 1

### Feltrinelli Librerie 3466

Readers, just like books, conceal an extraordinary desire for ever changing horizons, and the energy to go and seek them. This place is made for them. Readers and books. A unique, unexpected place to stop, meet new stories and take time to read with Mont Blanc as your companion and inspiration. A tiny bookshop at the highest point in Italy: Feltrinelli Librerie at 3466 m.

### SkyVertigo

Mont Blanc calls to you, inviting you to brush your fingers over it, to touch it. Don't be afraid, come closer. More. Without almost realizing it has happened: look to the right, to the left, and up. Now take a breath and look down: vertigo. You are suspended a few meters from the mountain and you are walking in the sky.

### The Mont Blanc and Crystal Room

It took the strength and tenacity of crystalliers to bring to light the secrets that

the mountain deep inside: quartz and crystals that encapsulate the energy of the earth but that seem to be made of heaven. They are the jewels of Mont Blanc, and he, the Mont Blanc, awaits you there at the end of the hall. As in a painting, but this is reality in all its splendour. One step among its treasures, another and the giant of the Alps becomes more imposing. Here the lines become as hard as rock and the snow shines every day of the year. A source of inspiration and a guide for every Skynauta.

### Aiguille du Midi Room

You can feel it in your breathing, in your heartbeat and in the way your legs move: the air is thin at 3466 metres and your body reacts to it. Choose a window, place your palms firmly on the warm wood and admire the infinite shades of white and blue of the perennial snows of the Mer de Glace, where the border melts between Italy and France.

## How do your cardiorespiratory parameters change at high altitude?

Here you can try our Keito K9 biometric stations and easily measure your cardiorespiratory parameters at Courmayeur\_The Valley and Pointe Helbronner\_The Sky at 3,466 metres above sea level.

In collaboration with Skyway Monte Bianco and thanks to funding from the IEO-CCM Foundation, Monzino Cardiology Centre and the Università degli Studi in Milan have set up a project to raise awareness among Skynauts about the effects on the heart and lungs of rapid ascent at high altitude. The installation is a data collection centre that gives visitors the opportunity to measure their weight, height, percentage of lean and fat mass, body mass index, and, most importantly, blood pressure, heart rate and level of oxygen saturation in the blood. Taking part in the project is really simple:

1. Go to the indicated point at the valley station and fill in the questionnaire on the touch screen on the right (click on 'Get Card');
2. step onto the scales and activate measurement of your parameters by inserting the card you have just received;
3. follow the instructions and complete the measurements;
4. keep the card to repeat the measurements once you get to the summit: you must take

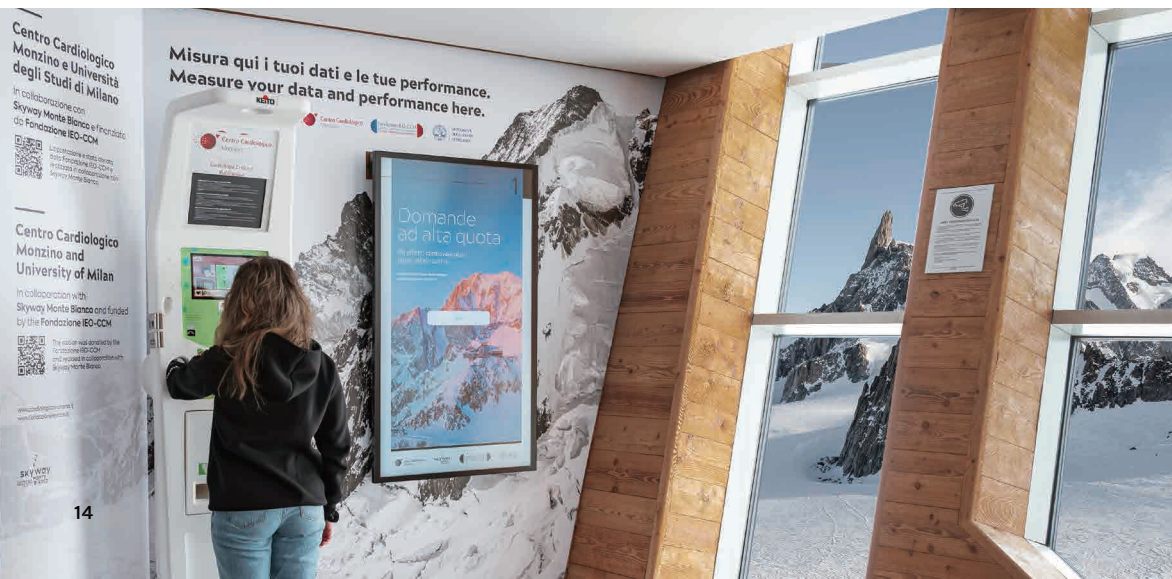

both measurements to obtain an accurate assessment.

You will get immediate feedback regarding the health of your heart and lungs and the effect of the rapid ascent to high altitude on your vital parameters. These few minutes are all it takes to aid work by the researchers at Monzino and the Università degli Studi in Milan, helping them to continue collecting data that already numbers thousands of measurements in subjects of all ages. In this way, you are making a small yet valuable and decisive contribution to excellence in scientific research.

### Instructions for activating measurement

1. Click on "Get Card" and fill in the questionnaire on the touch screen above;
2. step onto the scales and activate measurement of your parameters by inserting the card you have just received;
3. follow the instructions and complete the measurements;
4. keep the card to repeat the measurements once you get to the summit: you must take both measurements to obtain an accurate assessment.

Please note: biometric stations are only activated by the card issued at the valley station. You will not be able to get a card at the top.

## Technical information

Type	To and fro bicable cable car	
Manufacturer	Doppelmayr	
System design	Dimensione Ingegnerie	
Station architecture	Mr Cillara Rossi, Architect

Diameter of lower hauling cable	35 mm	35 mm
Diameter of emergency cable	16 mm	16 mm

# skywords

The cable car is not just a means for getting to 3466 metres and you, Skynaut, are not just a passenger.

The cable car is an idea, bringing man closer to the mountain and the sky, expanding horizons, going beyond borders. And you can learn its alphabet, use its words, learn its gestures from A to Z.

To become a part of it, body and mind.

## Ascent

---

Going up is physical movement, but also a private, deep movement. Going up, you will move your body higher and also move everything that animates it upwards. No fear, Skynaut. Get into the car and let the cable do the rest: here, your upward journey is called ascent.

## Compass

---

Aiguille Noire de Peuterey, Les Dames Anglaises, Mont Blanc, Mont Maudit, Dent du Géant, Grandes Jorasses, Cervino, Monte Rosa: a summit for every corner of the sky. Skynauts don't need a compass. They are guided by the spectacular sight of these peaks.

## Sky

---

You will touch 3466 metres and admire the world like you have never done before. But once you get to the top, close your eyes, listen to the wind's voice, the mountain's breath.

Then open them. Not only you will see it, you will feel it: there is no higher point in Italy. you are at the lowest point of the sky.

## Exercise

---

The mountain is not just exercise for muscles and lungs: it is also exercise for the mind.

During your ascent, your old thoughts dissolve, become distant. They move out to make room for new ones.

## Alpine guide

---

Skyway Monte Bianco is a safe environment and touching three thousand metres is a dream within everyone's reach, but up there each step is calculated. If you want to continue your adventure on the glacier or climb one of the mountains where this sport was born, make sure you have the right equipment and, above all, do not hesitate to choose a guide from the oldest association in Italy.

## Incredible

---

Small things, a noise that sounds like a distant musical note or a bird soaring in the blue, an alpine ibex balancing on a crag. Big thing, the woods that spread out from the foot of the mountain or the rock itself, solid and steady. Everything here is incredible. It depends on you, Skynaut. Incredible things say something about the eyes that manage to see them.

## Dialogue

---

Women and men meeting the mountain is the story of intense dialogue, spectacular, respectful, intimate. The story of those who looked at the summit without ever imagining they could get up there, the story of those who invented mountain climbing by going beyond their limits, and the story of those who enabled everyone to get up there, welcoming new Skynauts with a smile every day. You are now a part of this story.

## Freezing

---

Up there the air is rare, clean and can be very cold.

Make sure you have a hat, a pair of gloves, a scarf, warm clothing. Small Skynauts too.

That way you can stay outside in that clean air for as long as you want, and discover what oxygen tastes like. For the first time you will truly breathe.

## Hangar

---

The hangar at Pavillon is special. Like all hangars, it shelters a means invented by the imagination and genius of man to enable contact with the sky. But it also does much more: it takes care of the cable car, telling its story and keeping the dream alive.

## Limits

---

You have reached the top but you would like to go even further. Everything seems within reach, the glacier does not frighten you. But remember, a real Skynaut respects the mountain and knows that without a guide, sometimes you just cannot continue. The value of a guide is the ability to listen to the mountain, which teaches us our limits every day.

# skywords

## Destination

---

Skynauts are explorers: they look around, fascinated by the unexpected, follow their curiosity, get lost. When you want to find your path again, just take a look at the signs: they will guide you. You can reach destinations you previously thought unreachable.

## Nature

---

Nature is rhythm, equilibrium, harmony. The animals that live in the mountains and the secret of their actions, the circle of the returning seasons, spring and summer, autumn, winter. The next time you come this way, Skyway Monte Bianco will be the same cable car and yet it will be different: the mountain shows it how to change. And to you. Skynaut, it will bring new memories to take back down into the valley.

## Oxygen

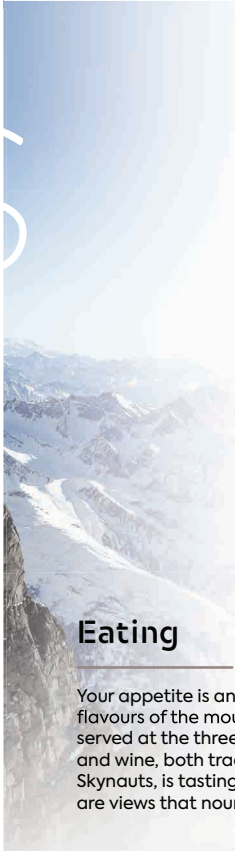

---

There is an intelligence found in the head, one in the heart and another in our lungs. It is the intelligence of a body that adapts, that reacts to altitude. The higher up you go, the less oxygen there is in the air, so listen to your breath: it will tell you when to slow down, when to stop, when to rest. Skynauts are in tune with their bodies and listen to their signals.

## Pilgrim

---

You are about to walk through the roots of the sky and, in your encounter with the mountain, you will hear an ancient story resound inside of you: the great silence of the heights. There is something sacred up there: the most human measure of hope, of wonder, of a desire to go beyond every limit and find out who we are. Up there, every Skynaut becomes a pilgrim again.

## Eating

---

Your appetite is another form of exploration: all the flavours of the mountain and the stories they reveal are served at the three stations, you can savour local food and wine, both traditional and modern. But eating, for Skynauts, is tasting the mountain while all around there are views that nourish the eyes.

## Sunset

---

Certain silences, certain unspoilt shades of green, certain colours of ice give the impression that time has stood still... so join it. Slow down. Treasure these moments. But even up here you cannot, unfortunately, forget the ticking clock. When the light changes, as soon as the sun starts to hide, check the time of the last ride back down into the valley.

## Vertical

---

The cable draws a light suspended line that heads skywards, joining just three points. Three stations. Visiting them, you realise that they tell a story of engineering effort, architectural enterprise, the wonderful human obsession of being up to the challenge of the mountain. They are what happens when, instead of tying our imagination to the earth, we think vertically.

## Picture

---

There are views and scenery so beautiful they look like paintings, so beautiful they are worthy of a frame as if they were works of art.

But no frame could ever do justice to centuries of wind and rain, ice and sun. If you like, take a photo, but then look at the painting of nature again: certain pictures can only be photographed with your eyes and memory.

## Senses

---

The frequency of your breath, the heartbeat that works differently up in the high mountains. It is a little like regeneration. The body feels it, as do the eyes, ears and fingertips: the senses are freed, opening up to the world.

## Humanity

---

The challenge is to climb the great mountain. Since the beginning, right from the birth of mountain climbing, Mont Blanc has been the place for contact between humans and nature in its most elevated form. But those not satisfied with just climbing, who let themselves be inspired by this nature, who respect it and learn about its fragile, tenacious harmony, become part of a humanity that wants to prove it is equally as elevated. This is the real challenge for every Skynaut.

## Backpack

---

The cable car will look after you, but remember to put into your backpack some clothes and a hat that will keep you warm: outside the stations the temperature can drop considerably.

And don't forget your sun cream and sunglasses because up there the light is different. Leave anything you don't need at home though, that way you will have more room for memories.

## **RANGE ROVER**

It is where the Earth stretches its fingers to touch the sky that nature imparts its silent lessons. Here, as in life, only those who reach high can truly see far.

This is a lesson that Range Rover has always embraced. The brand, that finds its true habitat among the peaks, has long set its sights on the future, embracing the necessary commitment to preserving the delicate balances that regulate our planet. Zero impact is, in fact, Range Rover's ambitious goal and part of the global Reimagine strategy, a new vision of contemporary luxury that places sustainable design at its core.

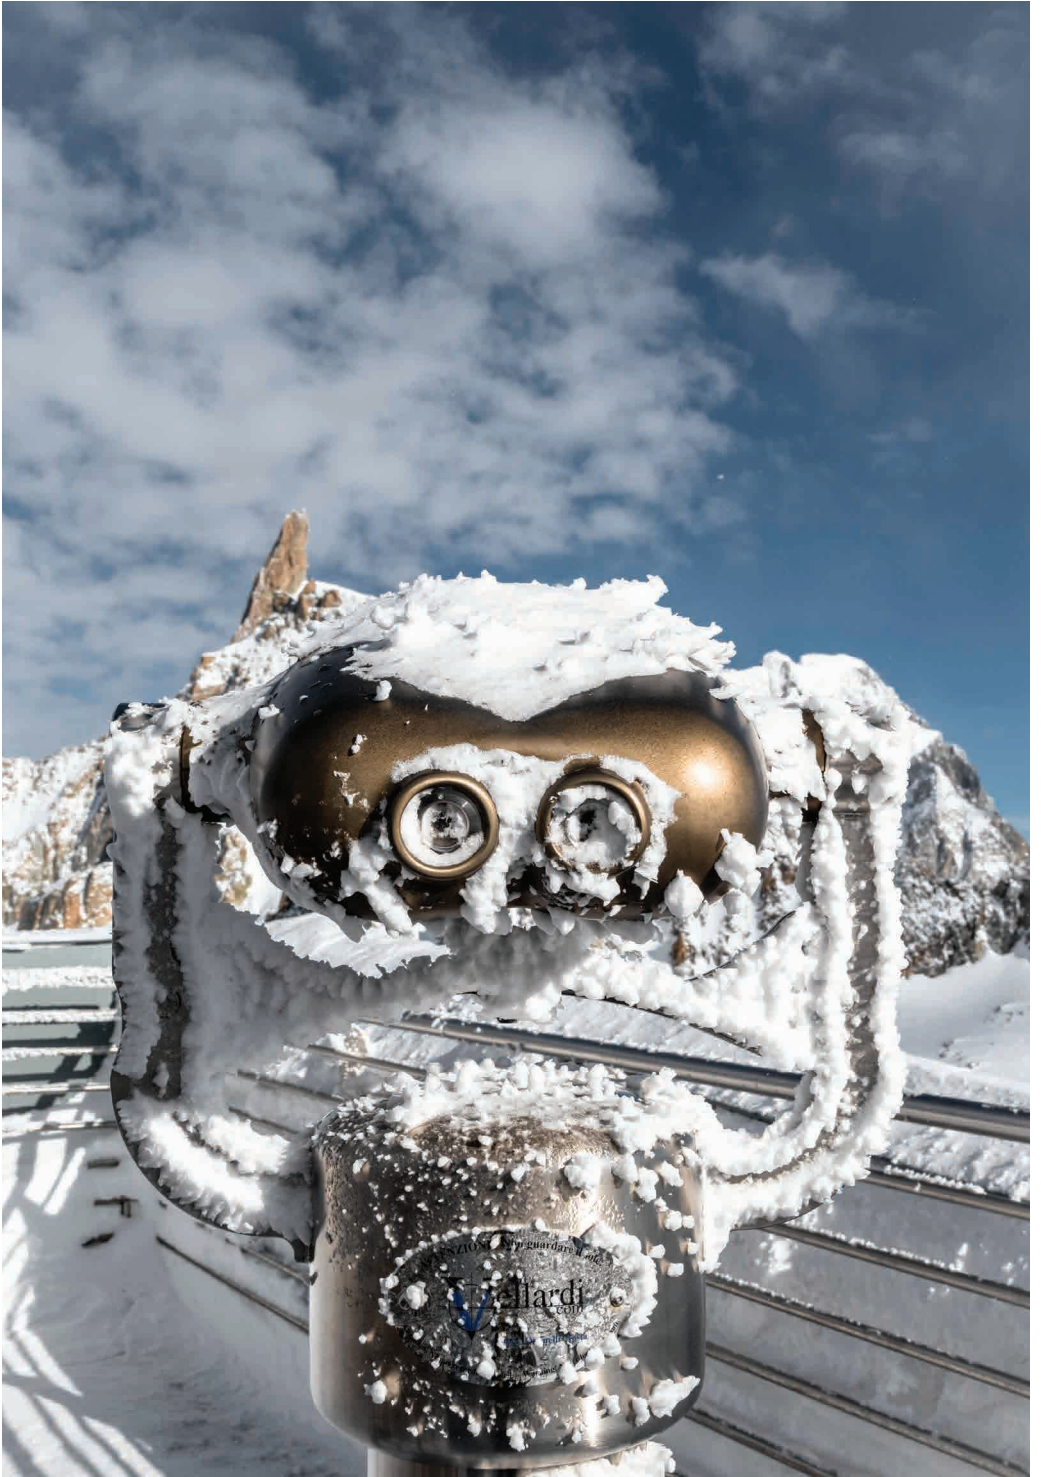

The same uncompromising spirit that the brand shows in its environmental awareness also characterizes its increasingly sophisticated style choices. Choices reflected in the experiences Range Rover offers to its refined audience, which over the years have made the exploration of the territory and its breathtaking landscapes even more thrilling.

# RANGE ROVER

The pursuit of excellence and unmistakable elegance gives a unique touch especially to the models of the British brand, which, one after the other, will become entirely electric by 2039. Starting with the highly anticipated Range Rover Electric, set to be released at the end of the year, which promises to be the quietest, most high-performing, and refined Range Rover ever.

It is only natural that there is a strong collaboration between the brand and Skyway Monte Bianco, rooted in the shared desire to enhance the extraordinariness of Mont Blanc while respecting a nature that is as unique as it is fragile. And in the ability to look up and let thoughts and inspirations be guided by the blue above us.

Evolving without altering your essence.  
Changing but keeping the same unstoppable, beating heart.

EdiliziAcrobatica becomes Acrobatica, a new name symbolizing the same mission: to change the culture of construction in Italy and around the world.

Look up: the revolution comes from above.

**ACROBATICA**<sup>®</sup>

RENOVATE. REBUILD. RETHINK

## Acrobatica

---

The sky is the only limit for Acrobatica, which is always seeking the next peak to conquer, fully aware that it will always be the second-to-last. Each peak represents both an endpoint and, more importantly, a starting point for Acrobatica: it is from above that the Acrobats descend, using the **double safety rope technique**, to take care of Italy's architectural heritage.

**"Caring": this is precisely what distinguishes Acrobatica's "conquest of the peak" as a different kind of conquest—one that does not seek to "capture" but to make beauty free, a conquest that is non-invasive but respectful of buildings, the environment, and people.**

Indeed, Acrobatica's mission is to **restore value to beauty**. Every day they pursue this, through a **certified, sustainable, and extremely "light" method**. Two ropes enable the Wallmen, the Acrobats on ropes, to reach places where others stop, **without leaving any visible footprints**.

The exclusive use of ropes ensures no impact on the site, maintaining full accessibility even during work. Moreover, the beauty of the buildings remains visible, as they are not obscured by additional structures.

Leaving a better world for future generations: this is one of the values shared by Skyway Monte Bianco and Acrobatica, which is performing the

routine maintenance of the installations.

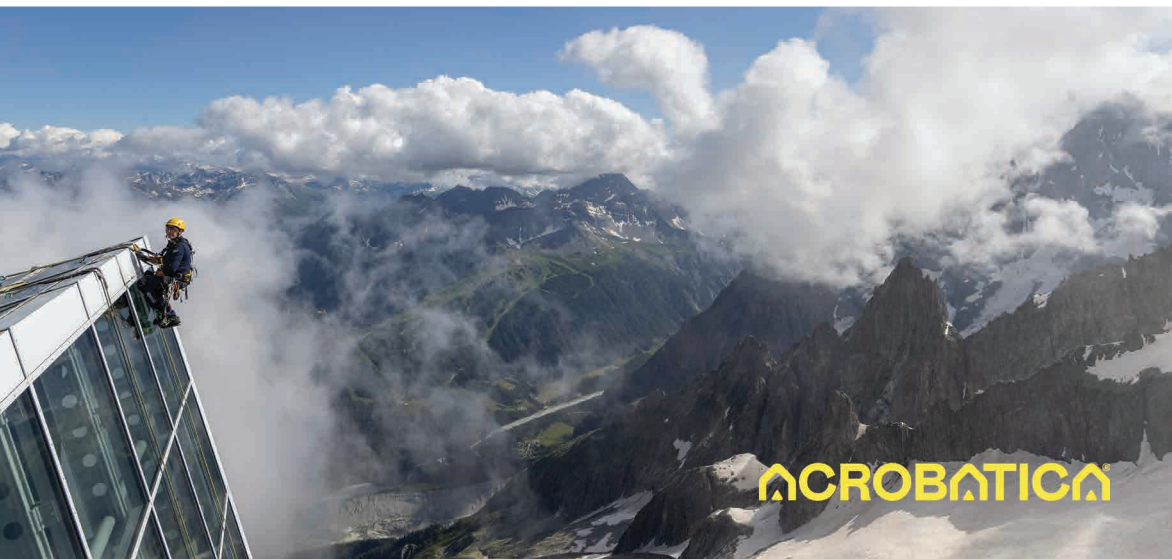

**Acrobatica and Skyway Monte Bianco are united by a deep commitment to preserving nature and its immense beauty. Acrobatica aims to represent positive change in the construction industry worldwide, offering a new perspective and, most importantly, innovative solutions that enhance value for people and the environment.**

To further its commitment to environmental sustainability, Acrobatica commissioned a study from the Tetis Institute (a spin-off of the University of Genoa) which certified that the rope technique ensures a 40 to 60% reduction in energy consumption and up to 40% reduction in water consumption compared to traditional construction methods.

Additionally, since 2020, Acrobatica has formalized its commitment to Sustainability, particularly through the development and implementation of various policies, including the ESG Policy, which concretizes the Group's commitment to sustainable business management and growth.

**For this reason, "lightness" is a conscious and daily choice for Acrobatica. Light, to preserve without altering. Light today, to avoid burdening tomorrow.**

**Learn more at [acrobaticagroup.com](https://www.acrobaticagroup.com)**

**ACROBATICA**

# SkyEtiquette

You are about to experience a unique ascent to Mont Blanc that will take you to an altitude of 3466 metres asl. In the presence of these unique high mountain sites, you are asked to put your mobile phone on silent mode. There is a need to surrender to dreaming, to let nature do its work, to respect unchanged beauty. Skyway Monte Bianco was created for this reason: to bring man and mountain closer through a slow, silent, accessible experience

## A few tips before you set off:

Follow the suggestions of our cableway staff and the signs inside the stations

Make your movements calmly and unhurriedly and in case of need immediately inform our staff

Don't forget sun protection, sunglasses, appropriate clothing for the altitude and a hat.

Please note that there can be significant temperature differences between the inside of the stations and the outside

In the event of a high number of people, the access flows to the Punta Helbronner station will be regulated

From Skyway Monte Bianco, only unmarked MOUNTAINEERING routes depart that are neither monitored nor protected against the dangers of high mountains such as avalanches and rockfall. The Thoula staircase is closed.

If you undertake a glacier hike, you must have the appropriate preparation and equipment. The accompaniment of a mountain guide is recommended.

**We hope that on your return to the valley you will be regenerated by the energy of Mont Blanc. Enjoy your ascent.**
